

OutDry® revolutionizes the concept of waterproof footwear.

OutDry® is the technology for waterproofing footwear. Thanks to an innovative lamination process, the very fine membrane is applied uniformly on the inner surface of the uppers. Each potential point where water could get into the footwear is perfectly sealed-off. With the former “bootie” system, the water was able to find its way between the membrane and uppers, consequently stagnating there. When water gets in, the shoe gets heavier; in very cold weather it could freeze and with movement it could deteriorate the padding and reinforcements of the footwear, compromising durability. The movement of the foot is restricted within a “sock”. With OutDry® no more water gets into the footwear. The foot is dry and there is no additional weight throughout the day. No “sock” and consequently the foot is free to move in a more comfortable space. The footwear maintains all the advantages of Sixton Peak over time.

Composite Toe Cap

ULTRA LIGHT PROTECTION Made of ultra light composite material, it is resistant to an impact force of over 200J, requested by the standard, and is capable of immediately regaining its original shape without trapping the foot in the case of a very strong impact. It ensures perfect thermal insulation, it is not electrically conductive and is not detected by the metal detector.

Wire Electricity Discharge

Strip with conductive silver filaments. In contact with the foot, this feature ensures anti-static footwear over time, with any type of hygienic insole.

dynamic **HC** control
technology

Ergonomic rigid internal structure. It houses the heel into the right seat, adjusting the foot support and control of the ankle sideways movements. It keeps the foot tight to the shoe, allowing the perfect fit.

 **STABIL • ACTIVE**

The rigid plastic support inserted into the sole beneath the heel and waist provides greater stability and support of the arch, consequently improving foot posture.

DUAL MICRO
DUAL MICRO

Non-slip microfibre will resist more than 200,000 Martindale cycles.

EN ISO 20345:2011

In terms of non-slip, standard EN ISO 20345:2011 states that the footwear must pass tests on 2 different surfaces with classifications related to the individual tests, SRA or SRB. As the requirements of both tests are passed, SRA and SRB, all the SIXTON PEAK footwear is awarded SRC non-slip certification.

SPUNTERBO

Scuff Cap

Designed especially for winter use. It is made of highly resistant and absorbent felt, which keeps the foot warm and dry. A softer and comfortable layer of insulating polyethylene and a film of “aluminised” polyethylene contribute in perfectly insulating the foot from the ground. Perfect for winter use and for “CI” marked footwear for protection against cold.

New anti-perforation fabric inserts, reinforced with fibers, which have an improved performance compared to normal inserts. They are resistant to fine carpentry nails as required by the specifications in the latest update to EN 12568.
